REFLECT™

SCOLIOSIS CORRECTION SYSTEM

REFLECT™ is an innovative scoliosis correction system designed to correct spinal deformities while **preserving motion, maintaining stability, and allowing for future modulated growth.**

LOCKING CAP

- Non-threaded design to eliminate cross threading
- Cord slides within the screw head before final tightening to allow better manipulation for curve correction

CREO® 4.75 MONOAXIAL SCREWS

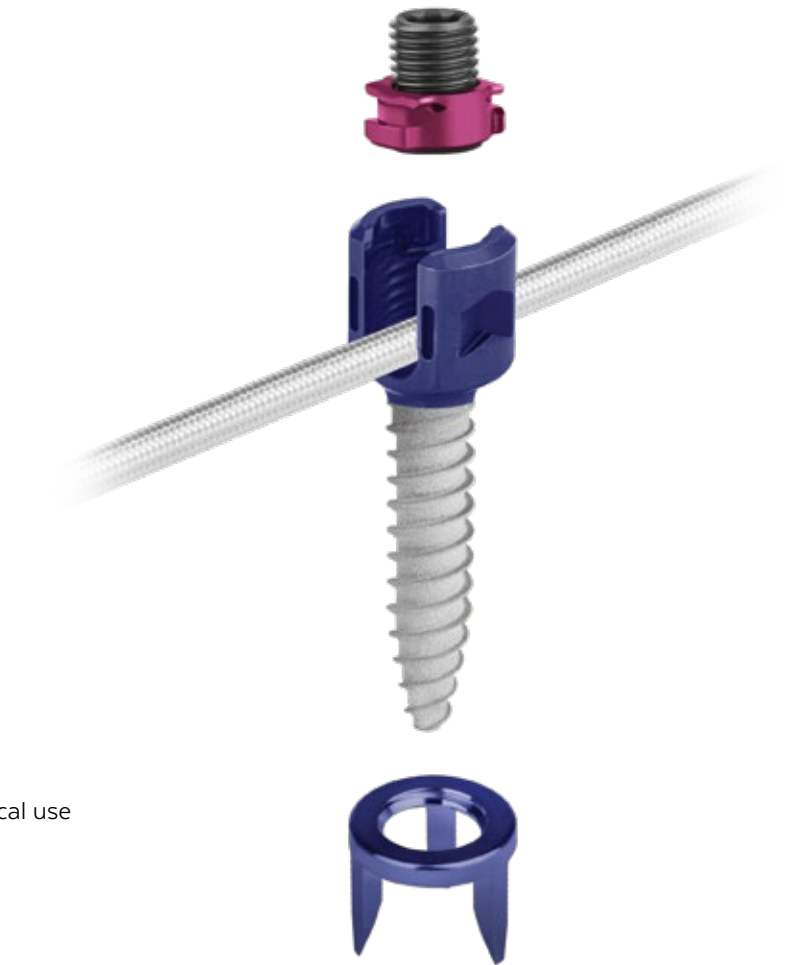

- Low profile, top loading screw design
- HA coated to promote bone ongrowth
- Blunt tip for bicortical purchase
- 2.5mm incremental lengths for precise placement

POLYETHYLENE TEREPHTHALATE (PET) CORD

- Non-rigid material to allow growth and preserve motion
- Extensively tested durable material with long history of clinical use

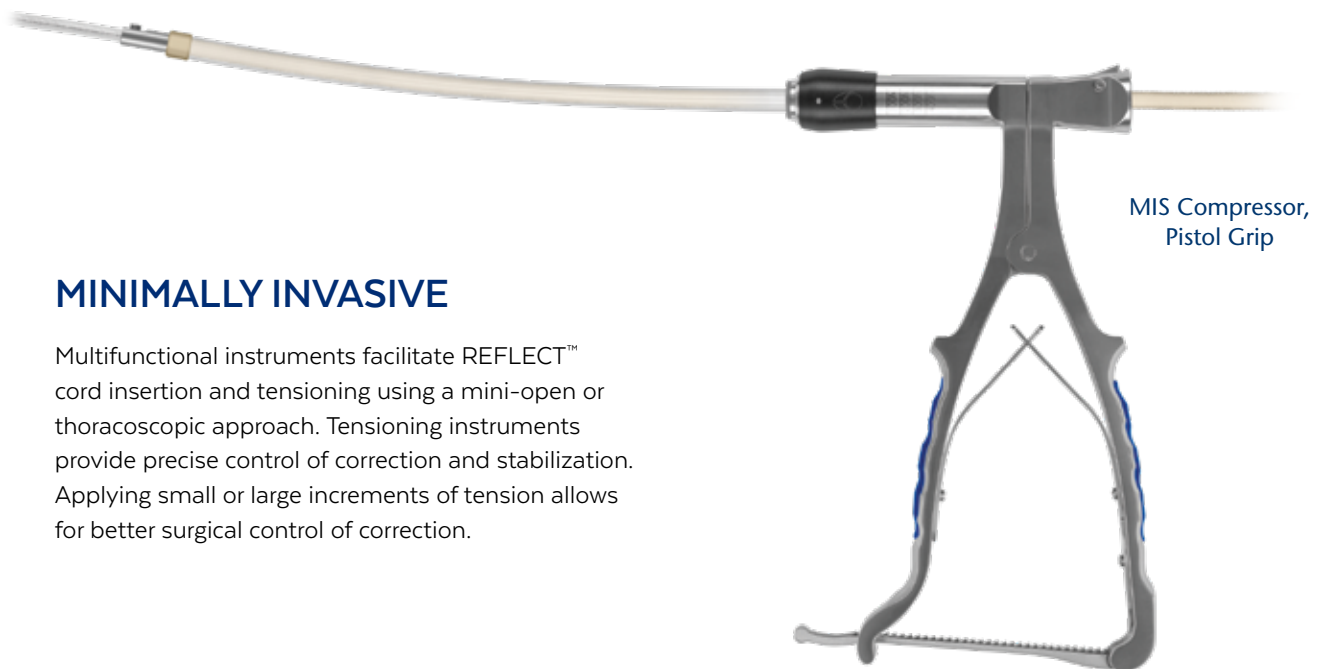

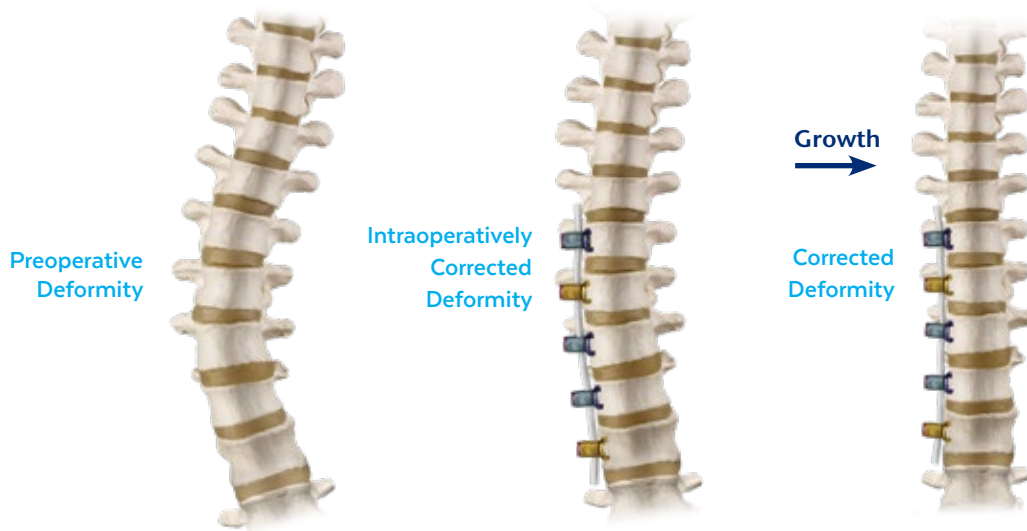

STAPLES

- Low profile and diameter-specific staples to increase resistance to screw toggle
- Three-pronged to provide fixation in small stature patients

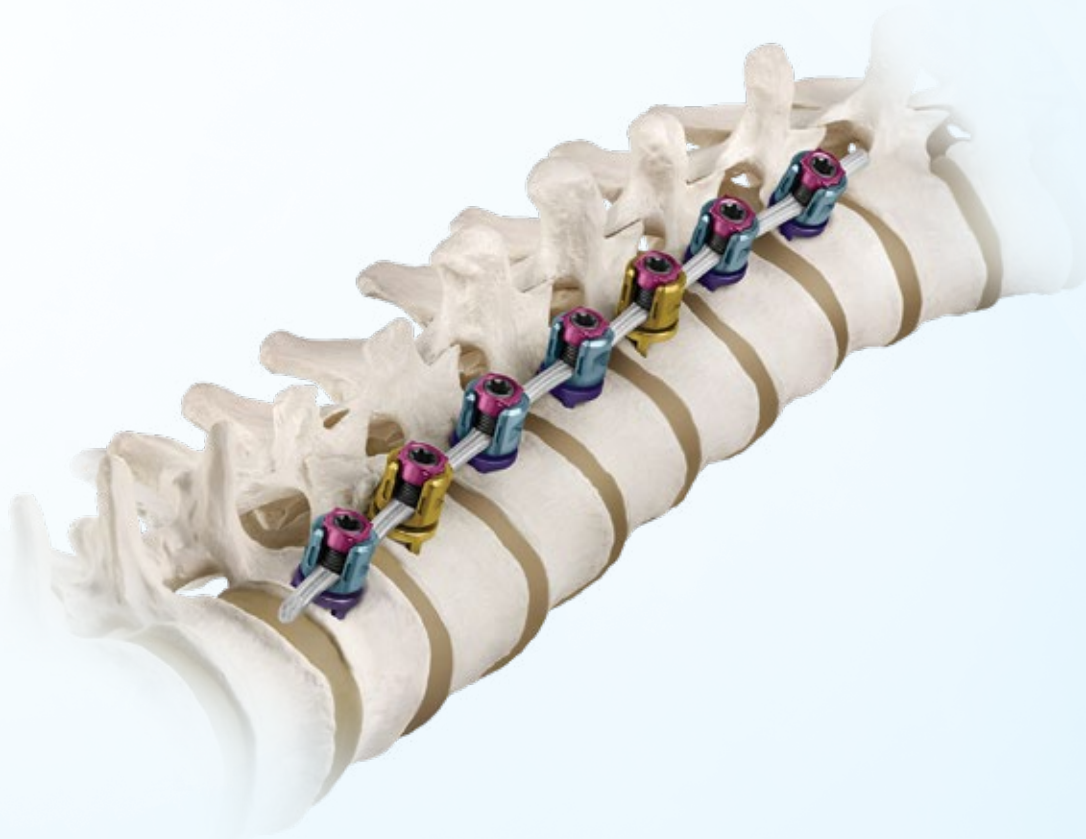

GROWTH MODULATION

The centerpiece of the REFLECT™ Scoliosis Correction System is a flexible, durable cord that allows for deformity correction by harnessing the power of innate patient growth. Fixation with the flexible cord is applied on the convex side of the scoliotic spine to limit growth on the convex side and allow unilateral growth on the concave side.

MINIMALLY INVASIVE

Multifunctional instruments facilitate REFLECT™ cord insertion and tensioning using a mini-open or thoracoscopic approach. Tensioning instruments provide precise control of correction and stabilization. Applying small or large increments of tension allows for better surgical control of correction.
